

LEARNING JOURNEY CHEMISTRY

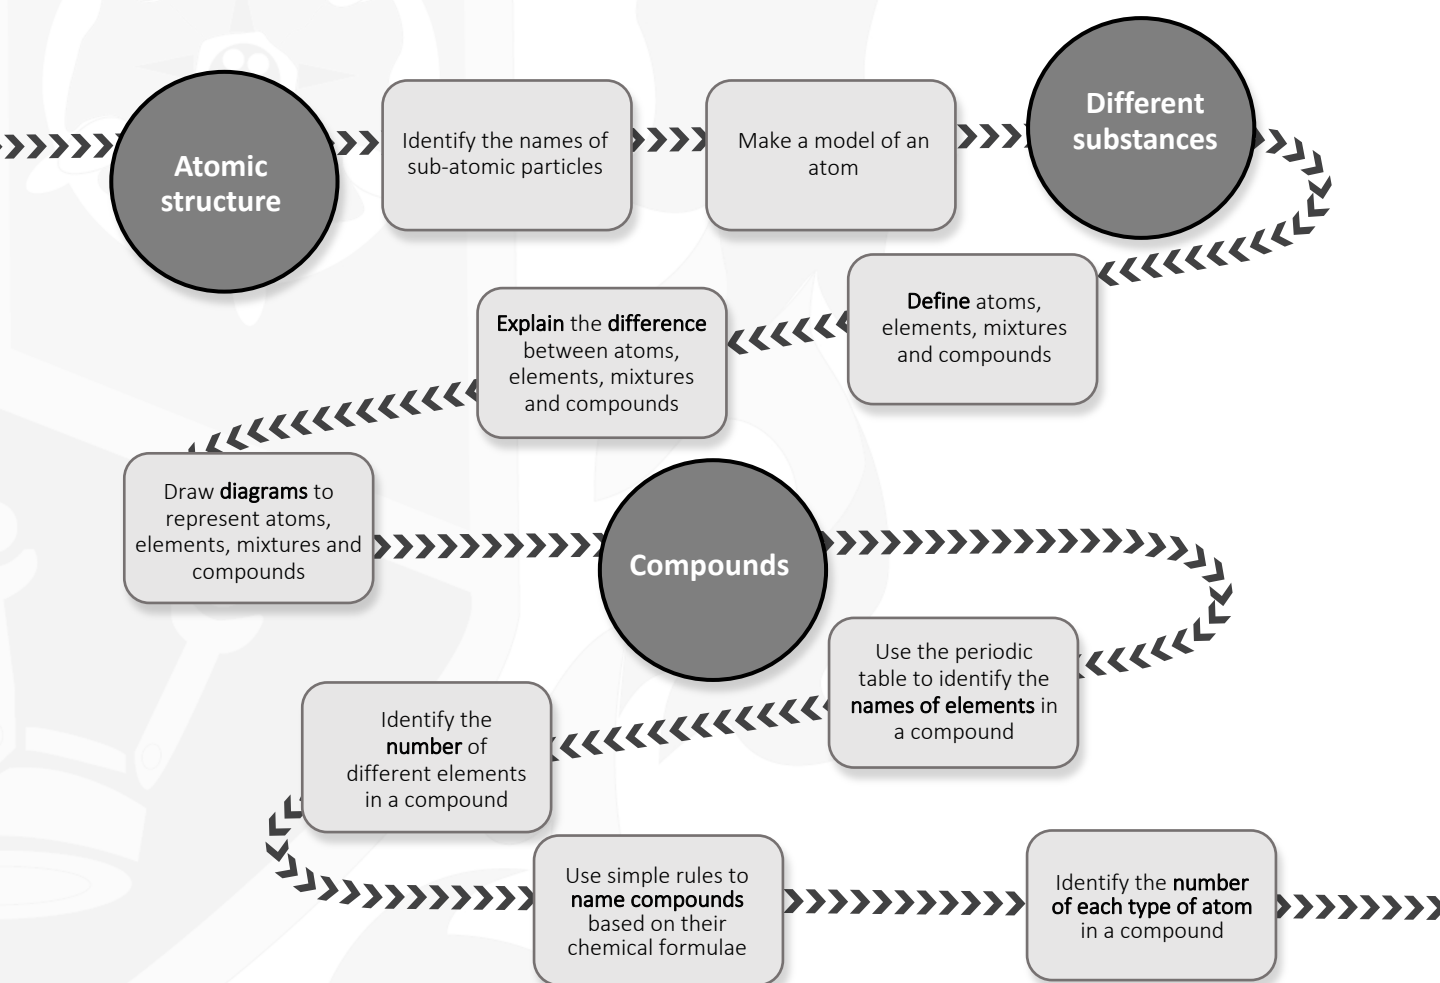

Elements, atoms and compounds

Year 7 Spring Half Term

The foundations of chemistry are built on the structure of atoms, the tiniest particles which makes up all matter in the universe!

This module will introduce you to atoms, and the different types of atoms that exist, called elements. You will start to study the periodic table and how different elements can chemically combine to make compounds.

TUDOR HABITS: You will develop your resilience in this challenging module and you will need to be open to failure and feedback as you try lots of questions for yourself!

VOCABULARY: atom, element, compound, mixture, reactant, product, proton, neutron, electron, positive, negative, formulae
