

LEARNING JOURNEY Chemistry

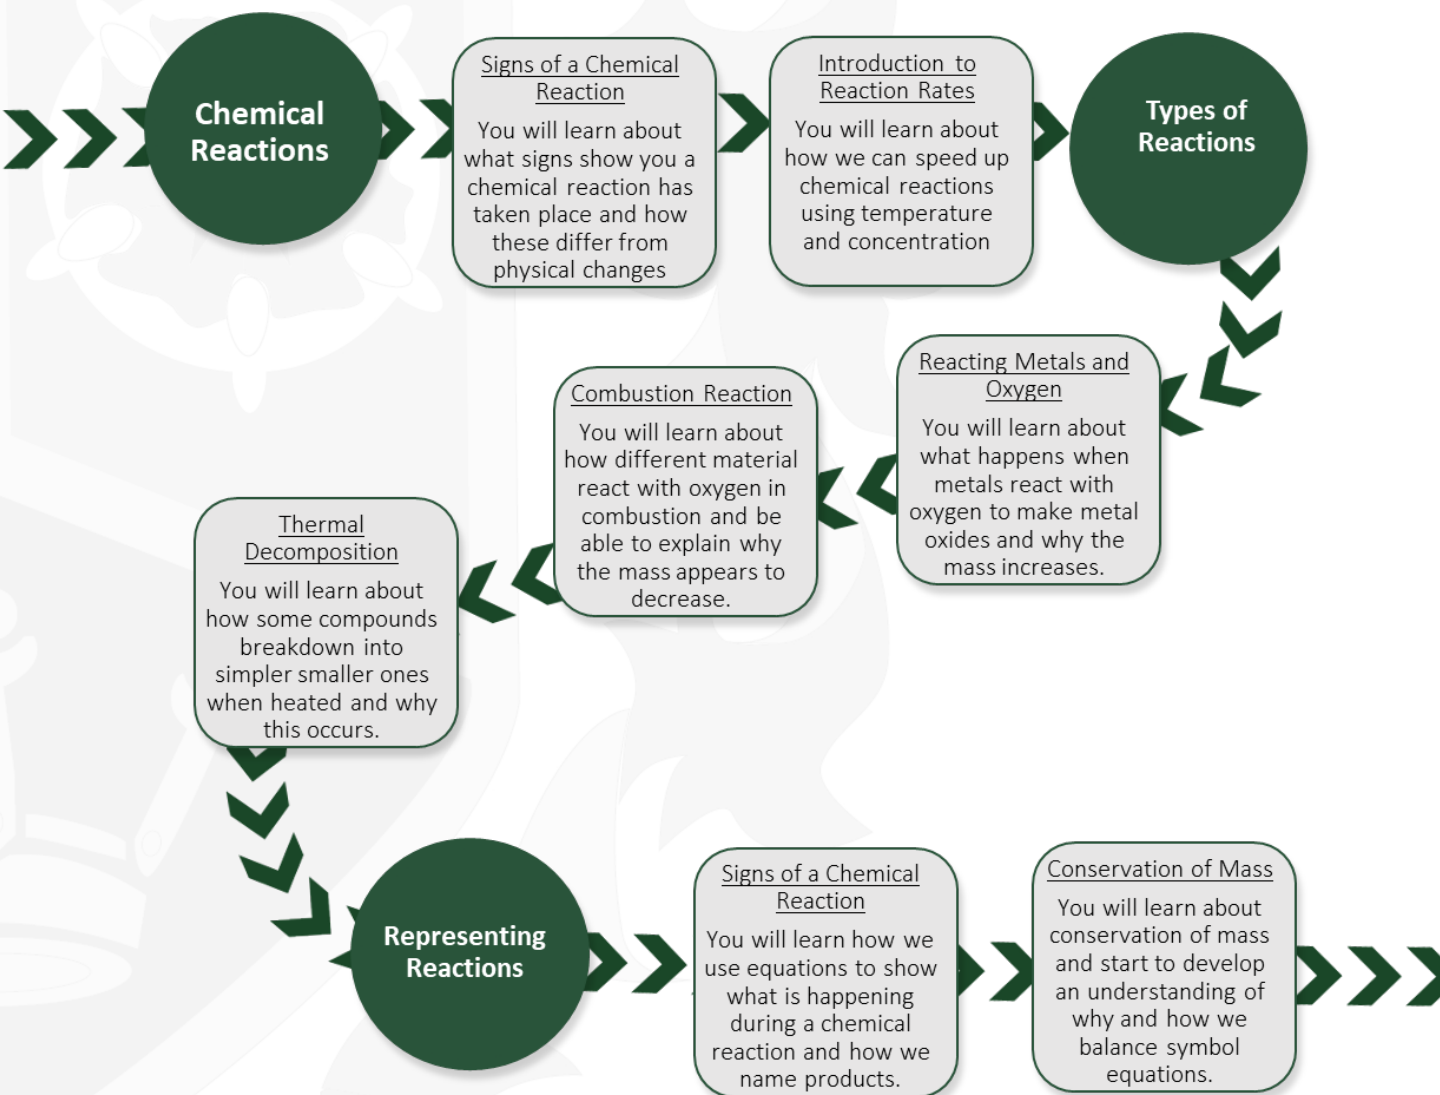

8.1 Simple Chemical Reactions

Year 8 Autumn Term

This module continues your learning journey from Y7 and links on work from previous learning on particles to now explain how and why chemical reactions happen.

This module will develop early understanding of specific types of reactions which include combustion and thermal decomposition which you will revisit later in school.

TUDOR HABITS: You will develop the Tudor Habit of Responsibility and Positive Self Regulation as you safely complete practical work to apply your learning.

VOCABULARY:

Reactant	Product
Rate	Catalyst
Metal Oxide	Combustion
Thermal Decomposition
