

LEARNING JOURNEY GEOGRAPHY

Geography in the Field

Year 7 Summer Half Term 2

Fieldwork is a fundamental part of Geography. It allows us to **research and collect data** on the phenomena taking place around us and improves our understanding of the world we live in. In your study of 'Geography in the Field' you will build and recap on **map skills** (our first topic of the year) and you may also find that some of your learning links to other subjects like **Mathematics and Science**, particularly with **creating effective enquiries and presenting data**. You will enhance your soft skills with a focus on teamwork, effective communication and also specific Character Habit traits! This is an opportunity to get outside and experience how Geography really is all around you!

TUDOR HABITS AND VALUES: You will continue to develop your grit and resilience as you continue to learn and master new skills in collecting and presenting data. You will develop your character habits by working effectively as part of a team.

VOCABULARY: data, validity, reliability, hypothesis, sustainability
