

LEARNING JOURNEY MATHS

Statistics

Year 8 Summer Half Term 2

Statistics is all about numbers and data. It helps us understand information in a fun and organised way. We learn how to collect data by asking questions and conducting surveys. Then we use mathematical tools like graphs and charts to organize and analyse the data. We can find patterns, trends, and make predictions. Statistics helps us answer questions like "Which is the most popular colour?" or "How does the weather affect our mood?" It's like being a detective of numbers!

TUDOR HABITS AND VALUES: Learning about statistics builds curiosity and criticality by equipping you with the confidence to navigate complex data and make informed decisions.

VOCABULARY

- Data
- Average
- Range
- Quantitative
- Qualitative
